Ultra-Lift Function – LKLT Specific

1. Introduction

The IMPULSE VG+ firmware allows over speeding of the hoist motion when the hook load is 50% or less. The Ultra-Lift function measures motor torque at base speed and then accelerates to the maximum safe speed. The function will not be enabled if the motor torque exceeds pre-programmed levels.

The LodeKing LT gearbox can be over-spiced to a maximum of 2700 rpm. This equates to a maximum speed of 150% base speed or maximum setting of 90Hz.

WARNING!

The Ultra-Lift function should not be set for a frequency reference of greater than 90Hz.

2. Settings

2.1. Parameter Files

The LKLT FLV default parameter files are set to Ultra-Lift disabled. The feature can be field enabled by changing parameter C06-01 to “1” and setting maximum speeds C06-02 and C06-03 to 90Hz.
